Your Car's Safety Features

Seat Belts

For your safety, and the safety of your passengers, your car is equipped with seat belts in all seating positions.

Your seat belt system also includes a light on the instrument panel to remind you and your passengers to fasten your seat belts.

Why Wear Seat Belts

Seat belts are the single most effective safety device for adults and larger children. (Infants and smaller children must be properly restrained in child seats.)

Not wearing a seat belt properly increases the chance of serious injury or death in a crash, even though your car has airbags.

In addition, most states and all Canadian provinces require you to wear seat belts.

⚠ WARNING

Not wearing a seat belt properly increases the chance of serious injury or death in a crash, even if you have airbags.

Be sure you and your passengers always wear seat belts and wear them properly.

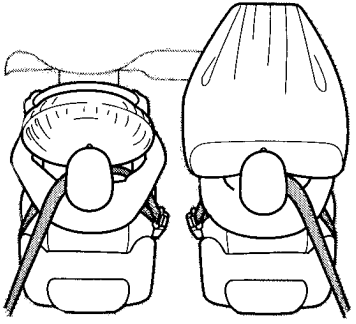
When properly worn, seat belts:

- Keep you connected to the vehicle so you can take advantage of the car's built-in safety features.
- Help protect you in almost every type of crash, including side and rear impacts and rollovers. (Your airbag can only be helpful in a moderate to severe frontal collision.)
- Help keep you from being thrown against the inside of the vehicle and against other occupants.
- Keep you from being thrown out of the vehicle.
- Help keep you in a good position should the airbags ever deploy. A good position reduces the risk of injury from an inflating airbag, and allows you to get the best advantage from the airbag.

Of course, seat belts cannot completely protect you in every crash. But in most cases, seat belts can reduce your risk of serious injury.

What you should do: Always wear your seat belt, and make sure you wear it properly.

Airbags



Your car has a Supplemental Restraint System (SRS) with frontal airbags to help protect the driver and a front seat passenger.

SRS This system also includes an indicator light on the instrument panel to alert you to a possible problem with the system.

The most important things you need to know about your airbags are:

- ***Airbags do not replace seat belts.*** The seat belts are the occupants' primary protection in all types of collisions. The airbags supplement the seat belts by providing extra protection for the head and chest of each front seat occupant in a moderate to severe frontal collision.

- ***Airbags offer no protection in side impacts, rear impacts, rollovers, or minor or moderate collisions.*** Airbags are designed to deploy only during a moderate to severe frontal collision.

- ***Airbags can pose serious hazards.*** To do their job, airbags must inflate with tremendous force and speed. So while airbags save lives, they can cause serious injuries to adults and larger children who are not wearing seat belts, are not wearing them properly, are sitting too close to the airbag, or are not sitting in a proper position. Infants and small children are at an even greater risk of injury or death.

What you should do: Always wear your seat belt properly and sit upright and as far back as possible from the steering wheel or dashboard.
